Full-Stack Web Development
Web Development
Data Structures
Operating System
SQL and Non-SQL Databases
Programming Systems
Discrete Structures

Relevant Experience / Projects

Feb 2023- Current / Seminaut-INC

Software Engineering

In the software engineering department, we use Python as our primary language for backend development, and JavaScript with ReactJS for front-end development. As a software engineer in this department, I am part of a dynamic team of 10 individuals who meet once a week on Discord to discuss ongoing projects and tasks. I am paired with another person, and our tasks are assigned through the ClickUp project management tool. I work closely with my partner to complete assigned tasks, ensuring that codebase standards are followed in accordance with Seminaut's guidelines. Additionally, I have the opportunity to collaborate with other team members and share knowledge and expertise. This role requires strong technical skills, as well as the ability to communicate effectively and work collaboratively with others.

Jun 2021 - Dec 2021 / Portland Open Data / Group Project

Front-end Web Developer

Working as a member of a six-person team to create a web portal that supports validating submitted datasets in order to ensure they follow a standard format. It returns a report of errors if any are present and sends a success message if it's successful. My responsibilities in this project are as follows: Works as a front-end developer. Designing and developing user-facing web and mobile applications. Collaborating with other team members, back-end developers, and the team leader to create visually appealing and user-friendly web pages and applications. Writing clean and efficient code using languages such as HTML, CSS, and JavaScript building reusable code for future use. Troubleshooting and debugging issues as they arise.

Oct 2021 / Commercial Website / Personal Project

Front-End Web Developer

This is my personal front-end commercial web project. Using HTML, SCSS, JavaScript, jQuery, and some other libraries, like OwlCarousel, to clone a commercial website. Creating visually appealing and user-friendly web pages and applications building reusable code for future use. Troubleshooting and debugging issues as they arise.

Sep 2021 - Dec 2021 / Currency Converter / Group Project

Full-stack Web Developer

This is the Frontend courses' final project. I work with another person to build a dashboard application that allows the user to convert from one currency to another. It typically displays a list of currency pairs and allows the user to select the pair they want to convert, input an amount, and see the equivalent amount in the target currency between currencies and common cryptocurrencies, and the application also allows users to track the top change in a week or month.
