SUMMARY

Software engineer with hands-on experience building full-stack applications, integrating APIs, and creating automation workflows. Skilled in C++, Python, TypeScript, React, and SQL, with experience connecting frontend interfaces to backend services, troubleshooting workflows, and working with teams to build software.

EDUCATION

M.S. Computer Science - Portland State University — **Expected June 2027**
B.S. Computer Science - Portland State University — **March 2022**

TECHNICAL SKILLS

Languages: C++, Python, Java, JavaScript, TypeScript, SQL
Frameworks/Libraries: React, Node.js, FastAPI, Flask, LangChain
Databases: PostgreSQL, MySQL, MongoDB, SQLite, ChromaDB
Cloud/Tools: AWS, GCP, Docker, Git, Postman, Rewst, CI/CD
Concepts: REST APIs, Full-Stack Development, Workflow Automation, Data Processing

EXPERIENCE

IT Automation Intern - JNR Networks, Tucson, AZ — **Jan 2025 - Apr 2025**

- Built a Rewst workflow that validated customer form submissions and created service tickets in ConnectWise
- Integrated Microsoft APIs to retrieve customer account, email, user ID, and company details for service tickets
- Used Jinja templates to insert and format customer data and apply conditional logic throughout the workflow
- Tested and debugged the automation with non-production data and demonstrated progress to a supervisor twice per week

Web Developer (Contract) - Seminaut Inc., San Marcos, TX — **Feb 2023 - Jan 2025**

- Built an interactive event map with React, TypeScript, and Mapbox for address search, nearby events, and event-detail markers
- Created an event form that placed new events at the correct map location from a name, date, description, and address
- Connected the React frontend to Flask APIs and worked on endpoints for reading and saving event data in SQLite
- Built responsive UI components, fixed frontend bugs, and collaborated through pull requests, code reviews, task boards, and weekly meetings

Portland Open Data Validation Tool - Front-End Developer — **Jun 2021 - Dec 2021**

Portland State University Capstone | Portland Open Data Partner

- Built a responsive TypeScript and SCSS interface for uploading and validating CSV and Excel datasets with more than 30 fields
- Connected the frontend to a Python REST API backed by PostgreSQL, displaying detailed errors, warnings, and valid-input examples returned from CSV and Excel validation
- Tested validation logic with pytest, containerized the application with Docker, and collaborated with a seven-person team through pull requests and code reviews

PROJECTS

PSU AI Assistant - RAG-Based Question Answering System — **Mar 2025 - Jun 2025**

- Worked on a four-person team to build a RAG assistant with Python, FastAPI, LangChain, Gemini 1.5, and ChromaDB using content scraped from PSU websites
- Tested the assistant with 100+ queries; student evaluations showed response times under 20 seconds compared with 100-230 seconds for manual searches, with 85%-100% answer accuracy

Google Maps Restaurant Finder — **Jan 2024 - Mar 2024**

- Built a restaurant finder with JavaScript, HTML, SCSS, and Bootstrap using Google Maps, Places, and Geocoding APIs
- Used browser geolocation and the Directions API to display nearby restaurant details and generate routes from the user's current position
